MobiScan House

Radiation-protected mobile chamber

Introduction with the MobiScan House

The radiation-protected MobiScan House is designed for the purpose of radiation-protection while identifying disease or injury within various regions of the body with the CT scanner outside the hospital, making this kind of medical service easier, more accessible, and more dynamic.

Placed near the hospital, or the city location, it provides the best solution for the hospitals whose rooms do not anymore fulfill requirements for radiation protection;
at the places who do not have a hospital for this medical treatment;
or in the case of national crises, such as viruses, infections, in which way the people who must take this medical treatment, do not come in contact with the people who are infected.

Made with all important parts, such as the CT room, monitoring room, and dressing rooms, designed so it fulfills all necessary requirements needed for CT scanning and radiation- protection, adoptable by its design size and design, and made with the specific radiation protection calculated by the authorized body, MobiScan House represents the best solution for the modern world.

MobiScan House

Steel structure

MobiScan House is designed to withstand the wind loads and atmospheric impacts. The steel structure is framed with thermally insulated panels, meaning that it will be thermally regulated at the conditions such as heat in the summer, or the cold in the winter.

Attention to details

The usage of the high quality audio/video system, and high the quality electrical system inside the MobiScan House, especially selected panels, are just one part of the carefully selected parts and materials which are used

Optionally equipped

Optionally requested, we can equip MobiScan House with the equipment you desire. Furthermore, we can deliver it with a CT scanner inside.

Radiation-protected

The internal walls of the MobiScan House exposed to the radiation will all have a requested thickness of lead and steel for shielding.

The project for radiation protection of the MobiScan House is done by the accredited company with European standards, and by the recommendation of IAEA (International Atomic Energy Agency), referral document NCRP Report No. 147, Structural Shielding Design for Medical X-Ray Imaging Facilities.

01

MobiScan House is the part of the brand X-Ray Doors.

02

X-Ray Doors is the brand dedicated to providing products that require radiation-protection.

03

More information about our other radiation-protected related products find at website <https://www.x-raydoors.com>

**X-RAY DOORS****RADIATION SHIELDED DOORS**

REFAFLEX is a Serbian and Slovenian company specialized in manufacturing radiation-shielding doors. We are a team that understands how important radiation shielding is, and that is why we want to introduce to you our company and brand.

As the manufacturer of one of the most important guards of safety in the field of radiation-protection, we would like to get you more familiar with our other products.

The range of our radiation-protected products cover:

- radiation-protected automatic sliding and swing doors on which we use a different number of safety and security systems and devices
 - wall shielding of the treatment rooms
- X-Ray Waste Container for disposing of radioactive waste
- standard X-RAY radiation-protected doors
- and of course the MobiScan House

We will provide you a full service,
because that we are a team who is thinking out of the box,
planning, researching, projecting, engineering,
manufacturing and finally assembling our X-RAY DOORS products.

We are listening and making the best protection you require.
More information about our X-RAY DOORS products you can find
on our website-<http://www.x-raydoors.com>

or at our LinkedIn profile <http://www.linkedin.com/in/xraydoors/>
